> LANGUAGES AND TECHNOLOGIES

- **Proficient:** React, Redux, GraphQL, Typescript, NestJs, NextJs, Python, Node, Express, Prisma, AWS (S3, ECS, DynamoDB, IoT Core, Lambdas and Amplify), MySQL, PostgreSQL, Figma, Jira and GitHub
- **Exposure:** Pulumi, Nx, MQTT, Golang, gRPC, DataBricks, Datadog, Sentry, Tableau, Docker, LaunchDarkley, Lokalise and Localize

> PROFESSIONAL EXPERIENCE

Gusto | Staff Software Engineer | Atlanta, GA (remote) **Aug. 2024 - Present**

- Leading the 401(k) workstream as the lead engineer, guiding two engineers to drive initiatives that enhance retirement benefit adoption and partner API integrations.
- Expanding product API integrations with partners (e.g. Guideline, Human Interest, Elevate, etc.) by enhancing SSO and OAuth flows to reduce customer friction, support cases and onboarding time.
- Developed an in-app marketing campaign using React and Ruby-on-Rails to drive 401(k) adoption, generating ~6.4% new leads in ~4 months.
- Refactored 1+ year-old codebase to standardize 401(k) provider data across multiple views, reducing update time from ~2 days to ~5 minutes by leveraging React hooks and component composition patterns.

Hyphen | Software Engineer Manager | Atlanta, GA (remote) **Aug. 2022 - Aug. 2024**

- Leading a team of 5 SWEs (1 Staff, 3 Seniors, and 1 Mid) to develop and launch 15+ customer-facing features.
- Leading the expansion of our product point-of-sale integrations with enterprise platforms (i.e., Toast, NCR, etc.) and customers by defining APIs, data exchange, and workflow strategies.
- Participate in collaborative feedback sessions across various teams, including engineering, product, and design, through Product Requirement Documents (PRD) and Figma reviews to define user-centric features.
- Migrated the team's database from AWS RDS to DynamoDB, achieving a 99.97% annual cost reduction from over $1,000 to less than $10, optimizing infrastructure expenses and driving budget sustainability.

Hyphen | Founding Senior Software Engineer | Atlanta, GA (remote) **Feb. 2021 - Aug. 2022**

- Architected and built the zero-to-one web applications using React, Redux, GQL, AWS, etc., to streamline data management and drive successful customer pilots from seed round to $25M+ Series A.
- Architected and built the zero-to-one POS integrations with Toast and NCR-Aloha using AWS Step Functions, DynamoDB, S3, and IoT Core, enabling successful customer pilots and paving the way for enterprise scaling.
- Participated in 29 interviews, contributing to the recruitment and onboarding of 77% of the current SWE team.
- Streamlined the new engineers' onboarding by crafting a structured process with architecture deep dives, environment setup guidance, tailored starter tasks, and hands-on mentorship.
- Launched and hosted bi-weekly "Team Demos" to celebrate the SWE team's progress and foster feedback and recognition to boost engagement.

Samsara (NYSE: IOT) | Software Engineer IV | Atlanta, GA **Jul. 2019 - Feb. 2021**

- Architected and built 10+ full-stack web, mobile, and API features using React, React Native, Redux, GraphQL, Golang, gRPC, MySQL, and AWS to streamline dispatchers and driver communication through digital documents and SMS.
- Built 64% of the Q1 and Q2 2020 OKR features, resulting in 2 customer commits and 5 OKRs behind achieved.
- Led the team with 96 pull request reviews, pivotal in focusing on code precision and high quality.
- Achieved a 33% higher pull request velocity compared to the team average.
- Developed 9 Tableau dashboards with a Databricks integration, providing the product team insights on document feature usage and media upload observability.
- Led developer on a team of 5 for a Driver Etiquette hackathon project, resulting in the best company inclusion award and the successful patent filing. (link)

- Contributed to the company's engineering blog with a 'Dev Spotlight' article, showcasing my experiences and insights as a Samsara engineer. (link)
- Recognized for embodying the company's core value of “Build for the Long Term” in the first year of the internal awards program.

Intel | Cloud Software Engineer II | Hillsboro, OR **Sep. 2017 - Jul. 2019**

- Built the DBaaS authentication portal e2e solution to enable secure and effective database management with Reactjs and Nodejs.
- Learned Golang to accelerate the completion of a CLI tool to make scripting, debugging and database information retrieval faster.
- Migrated 10+ database management RESTful API endpoints from SaltStack to Golang modules, resulting in 40X faster client-server responses, and consolidated our backend to Golang.
- Designed 7 wireframes and mockups using Sketch design tool to eliminate content discovery complexity.

Intel | Cloud Software Engineer | San Antonio, TX **Jun. 2016 - Aug. 2017**

- Used Python to build OpenStack Keystone in-code solution to automate default RBAC rule registration, which eliminated standard role management for operators.
- Leveraged Python to parse and aggregate duration data during the rolling upgrades of OpenStack to produce the serialized JSON models for the Kibana visualization dashboard.
- Created a testing plan to identify 30 API validation scenarios to execute during the rolling upgrades of OpenStack Cinder to measure service uptime and downtime.

Boeing | Software Engineer, Intern | Houston, TX **May 2015 - Aug 2015**

- Contributed to and supported existing proprietary web applications for the International Space Station Software Development and Integration Lab using Java, PostgreSQL, and Hibernate.
- Designed and developed a job scheduler application using Java and AJAX to meet the requirements of 5 NASA engineers.
- Documented software issues and tasks to be completed using Microsoft Team Foundation Server, following agile software methodology.

> EDUCATION

B.S. Computer Science, ***Tuskegee University, 3.78 GPA*** **May 2016**

> PROJECT WORK

@antdwash | Youtube Content Creator | live **Dec 2017 - Jan 2018**

Collaborative learning community to increase programming knowledge and opportunities for all.

- Uploaded 3 videos related to iOS mobile development, earning 200+ subscribers and over 18K total views.

Tuskegee | iOS Software Engineer (self-taught) **Nov 2017**

Mobile app developed for Tuskegee University to simplify information discovery for students, alumni, and guests.

- Crafted prototype wireframes using Sketch and built an app in Swift; achieved 350+ app installs and 4.8 reviews.
- Deployed RESTFul backend using Node.js and MongoDB on AWS; switched to Firebase saving $300 annually.

> LEADERSHIP + AWARDS

Mentor, *UNCF Portfolio Project* Sep 2018
FOCUS Program Scholar, *Georgia Tech* Jan 2016
Summit Scholar, *UNCF HBCU Innovation Summit* Oct 2015
Boeing Co., *Excellent Software Development Award* May 2015
